ARBITRATION BODIES UNITE FOR STRENGTH

American Arbitration Association, Just Formed of Three Others

CALLED GREAT STEP FORWARD FOR UNITY

Brings Into Harmony Various Movements for Settling Disputes Amicably

Special from Monitor Bureau NEW YORK, Feb. 1-An order which consolidates the Arbitration Society of America, the Arbitration Foundation and the Arbitration Conference under the name of the American Arbitration Association, has just been signed by Judge Aaron J. Levy, sitting in Part I of the Supreme Court. This order enables arbitration in the United States to take a great step forward, in the opinion of leaders in the movement.

on signing the order, Judge Levy said: "I am especially happy to sign the order which brings into unity and harmony the various edu-On signing the order, Judge Levy cational movements in the United States for the promotion of arbitration as a means of settling disputes. It is a real privilege to sign of our people for peace in all walks of life."

Judge Moses Grossman, founder of the 'Arbitration Society of America, commenting on the merger said:
"Since the Arbitration Society was founded the demand for information and service among business men who are services as a service among business men who are s desire to make use of the benefits of the New York State and other arbi-now being supported in Eastern unitration law- has far outgrown the modest organization which our di-

Humane Ideas Find Expression in Jail

Memphis, Tenn., Jan. 28

Modern ideas in the handling of persons waiting action of grand jury or trial are embodied in the new \$1,000,000 criminal court building of Shelby County, Tennessee, which are proving of interest to students of criminology and penology. and penology.

The new building contains on its

upper floors the county jail with a present capacity for 150 prisoners. Windows are, provided with the latest appliances for ventilation, and there is a system of artificial ventilation. Each cell accommodates two prisoners, and is equipped with hot and cold water, wash basin and toilet. Cooking is done in a modern kitchen; the prisoners are served from trays in their cells, and the jurors eat in their own dining room on the corridor with their dormitories.

BAKING MERGER PLAN MAY FORM CONGRESS ISSUE

\$1,000,000,000 Proposed Corporation Seeks to Unite Three Large Concerns

Special from Monitor Bureau 000,000, is to be a philanthropic enterprise, as its officials declare, or a monopoly of an essential food, is a question certain to come up both before the Federal Trade Commission and before Congress. The merger would link the Ward Bakery Company, the General Bakery Corporation, and the Continental Baking Corporation, the latter of which is already under investigation by the Federal Trade Commission. Two years ago Robert M. La Fol-lette Sr., then Senator from Wis-

consin; directed the Federal Trade Commission to ascertain whether there was restraint of trade in the bread industry. Since that time the process of consolidation in the bak-ing business has gone steadily on and reached its climax in the present

Criticism of Inquiry Method

The commission's handling of the baking investigation has produced criticism from some members of the commission. John F. Nugent on right in the middle of this in-quiry, the situation is full of potenmore plants, it is said.

from Wisconsin, is understood to be making an investigation of the presas no aeronautical instruction is ent status of the bread industry available west of Michigan. which was started by his father. While Mr. La Follette refused to comment on the proposed new merger, George W. Norris (R.), Senator from Nebraska, was more designed to make this movement a superb credit to the United States and a great asset to American business. The unification and consolidation of the activities for the promotion of business arbitration into the American Arbitration Association is the result of this belief."

Charles L. Bernheimer, who was president of the Arbitration Foundation and whose service to arbitration in the educational activities under the superbola of the merger would cause a monopoly of one of the people's necessities of life. In discussing the proposed philanthropies with which Mr. Ward is said to be considering binding up the incorporation of his immense business, Mr. Norris says he refuses to accept the ward merger would cause a monopoly of one of the people's necessities of life. MAYOR NICHOLS OPPOSES REVERE ANNEXING PLAN

'Time Is Not Ripe," His Spokesman Explains at State House Hearing

MR. WADDELL LOOKS FOR \$40 TAX RATE

Levy Should Be High to Make Citizens Realize, He Says-Lauds Walsh Regime

Through Corporation Counsel Frank S. Deland, Mayor Nichols of Boston today told the Massachusetss Legislature's Committee on Metropolitan Affairs' that he does not think the time is ripe for annexation of Revere to Boston. Arguments opposing annexation were presented at today's hearing, and there was a large attendance of citizens, members of the Revere Taxpayers' Association, who favor annexation.

"L expect the Revere tax rate to drop from \$48.80 per \$1000 to around \$40," testified Theodore N. Waddell, director of the state Division of Accounts, speaking at the request of Andrew D. Cassassa former state Senator from Revere, who led the

Mr. Waddell said that the great city debt and high tax rate in Revere and disregard of a budget system on the part of previous administrations, but that the present administration is seeking to be economical and wipe the slate clean with a tax rate which shall cut down past debts. Next year, he pointed out, a much better fiscal condition will be presented and the tax rate may drop as much as

Evidence Against Annexation Despite the fact that evidence today was almost entirely against an-nexation, the hearing room was jammed with supporters of the change. Albert Hurwitz, former Assistant Attorney-General, represent-ing the latter group, said he had told his followers last week that they had had their day in court and not to come again, but their enthusiasm brought them to the State House again today in a great throng. There was plenty of noise and excitement and speakers hostile to an-

nexation were rewarded with groans and hisses.

Mr. Waddell praised the administration of Mayor Walsh, and said, "More had been accomplished in 12 months than I thought could be ac-

complished in three years."
He said that the situation a year ago was extremely serious. He said he came before the committee merely be high. It ought to be cleaned up and the situation brought home to the people—just what they have been doing. It is a hard problem, but they can meet the situation if they put their shoulders to the wheel, if they

\$40 or below that figure, and I believe the departments will be main tained. If they continue to watch absolute necessities, there is no reason why the rate should not be reduced.

By Cable from Monitor Bureau LONDON, Feb. 1-It was a moving experience for English listeners to sit by their quiet fireside at home with radio set and a small frame aerial and listen to the great volume of rejoicing from the inhabitants of the city of Cologne when the British occupation in that city ended at midnight yesterday. The Christian Science Monitor representative, who had visited Cologne during the occupa-tion, and seen the quiet, subdued manner of the inhabitants now heard the impassioned speeches of the ora-tors rejoicing in their restored free-

prosperity and happiness.

The intervals between the speeches were filled with the sound of the concourse of people singing "Deutschland über Alles" and 'Grosser Gott wir loben Dich." Following this came the deep tone of a trative of the new ideal in education great bell in the cathedral tower, as exemplified in the so-called prowhich had been kept silent till this gressive school. occasion, though placed there nearly In the words two years ago, and it strokes shortly joined by the bells of other Cologne churches, forming a grand medley of joyful sound.

For its 1926 school exhibit, the sage the new type of school in which Bookshop for Boys and Girls at 270 the child is studied and helped to develop along the lines o.

> It should be understood that many the British Isles and Europe are today trying out new ways, because they are free to experiment, Miss Bertha A. Mahoney, director of the Book Shop, told a representative of The Christian Science Monitor. The schools of the State are not so free. The taxpaying public has a right to demand that the subject-matter selected for school work shall be sufficiently valuable to justify the time that the State compels the child to attend the school, and that methods shall be effective and economical.

This means that public school generally cannot experiment to discover new ways. They must use proved and approved methods. So for the most part the private school must blaze the trail for schools generally. Nevertheless more public schools in the United States than Boston and New England are gener-ally aware of have broken away from old traditions and have revital ized school work to combine living with learning.

As a small contribution toward informing public opinion the Book-shop held its first exhibit of children's own work from new schools in 1922. Then in 1923 and 1924 the work came from private schools in Boston and New York, but last year's exhibit came from Winnetka, Ill. where the entire school system is onducted along new lines. Last summer the Bookshop showed "free" drawings done by children in all parts of the countr

The present exhibit, like those that preceded it, is characterized by originality, artistry, joy in the work and often shows a surprising degree of technical skill not usual among children who have been carefully drilled in technique under the old ideas of education.

Belmaison Furniture

Adds Fascinating Opportunities to the February Sale

Savings of 10 to 25 Per Cent

Every Furniture Sale finds a new Belmaison! With opportunities quite excitingly outnumbering those of any previous sale. Now so many new pieces have been added to its collections that already the greatly enlarged space into which it expanded less than a year ago is crowded. And with so much to be shown, no attempt at ordered arrangement could be made. But each piece is marked as always with the red tag that shows the savings of the Sale, And that, after

What Belmaison Stands For

such proportions, it has never outgrown its original purpose . . . to reproduce for settings of definite style and character the furniture belonging to the decorative tradition of each. Abroad it has chosen only the best to be found in Italy, England, France and Spain. And in this country it has had Au Quatrieme's fine early American as well as its other antiques to copy. And every Belmaison piece is a copy . . . a faithful one! . . of an actual antique, with the exception of the admirable overstuffed pieces, carefully designed by us for special houses. It is possible to go through Belmaison and find the correct furniture . . . so complete are its collections . . . for any good type of

If Belmaison has grown to

FOR ELEVATED

M. Henri Correvon, having passed three score years and ten without leaving Europe, has come to the United States from Geneva, Switzerland, to tell folk of the beauty and to tell folk of the beauty and the within gardens, with good of the increasing interest in education. Other speakers included E. K. Hall, satisfaction to be found in growing rich soil planted in the crevices and interstices between the stones, where experience of limitless snows and lofty altitudes in the Alps was to find the sea "eccentric." But he had found it more than eccentric. He dens, the rocks would act as predent the sea "eccentric." had found it amusing, he said, with servers of even temperature as well was not he, who had lived bound to flowers and plants, seeing a new world for the first time, and was not the hunty burly of the and was not the hunty burly of the control of the first time, and was not the hunty burly of the control of the contr as a mulch to keep the moisture i the hurly-burly of the seas part of the M. Correvon evidently had no in-

The Lowthorpe School of Land-scape Architecture for Women has brought M. Correvon to the United States. The climate here is right for the cultivation of Alpine plants yet, be spread like a magic carpet at the curiously, few, comparatively, seem to realize it. From now until May, M. Carrevon will travel the country under the auspices of the school which thus renders incalculable service to the cause of horticulture, telling what has been done in Switzerland and what can be done here.

Mrs. Cyrus W. Merrell, president of Lowthorpe, indicated the public anticipation by telling of her own experience in a day coach coming from Groton. She was examining some of M. Correvon's stereopticon slides. Folk about her peered, first surreptitiously, then they frankly gathered about and said, "But we must be allowed to come and hear this man from Geneva," and Mrs. Merrell gladly made it possible.

Delivers First Lecture

Today, at the Women's Republican Club in Beacon Street, M. Correvon lectured publicly for the first time. Tomorrow, at 2:30, at Horticultural Hall, he will show his slides and tell his story of years of un-remitting labor with the stern soils of the Alps and the gardens, his of the Alps and the gardens named, felicitously, "Flo-gardens named, felicitously, "Flo-raire," which have become famous plained: the world around among people who

When M. Correvon was a little sult. Basic wage rates of 72½ cents per he was sent to study with boy he was sent to study with bel in Zurich. While the boy was studying there came Edmond Boissier, who was then engaged in writing his "Flora Orientalis," to have long conversations in the beautiful

gardens of Froebel. This was at about 1870. In 1875 the boy went to Paris to study at the Jardin des Plantes and in 1877 he won his first medal for meritorious work and exhibition. It was, his family pointed out according to their lights "a medal given for the growing of weeds," but it was, also, the average amount necessary, car mile-final inspiration needed by the boy to age operated was reduced 500,000, start his independent work.

So he laid out his first gardens near Verdun. Conditions were, however, unsuitable and he failed dis-mally. But his determination was unflagging and something guided him to Switzerland, so that he began there the construction of "Floraire." He had a premise, this boy, who was destined to be the greatest Alpine flower grower of his time. It was: 'A garden should be beautiful and resemble nature as much as possi-

M. Correvon's home is in Chêneearly became his determination to resumption of full-time work in the shops and a substantial increase in make sanctuary, too, for the protection of the trees and wild-flowers of the number of car-trips and car-Switzerland, so he established, with the aid of numerous societies equally interested with him in the preservation of native plants, the Jardin dela Linnea at 6000 feet altitude.

DARTMOUTH ALUMNI

Morain and Wall Gardens

In the gardens of "Floraire" he has laid special emphasis on the beauties and potentialities of observed, as M. Correvon talks, that him morain gardens hold particular delight, those heaps of glacial stones "which I would call 'Troubiere,' with water flowing under the stones, which, while the gardens themselves remain practically dry, insure an even temperature day and night."

He believes wall gardens, such as those on the estate of Prof. Charles S. Sargent in Brookline and the General Weld estate in Dedham, best suited to the New England climate.
"I should think," he said contemplatively, "that there is much sand-stone here," and it was a mystery why he thought so just then with only a vista before him of the sleek width of Commonwealth Avenue and a little strip of the frozen Charles the ingredients of nature

But Loring Underwood, landscape architect who was in the group pointed out that there was native

Spanish Airmen, After 1432-Mile Hop, Keen to Resume Long Flight

By the Associated Press

Pernambuco, Brazil, Feb. 1 With more than half of their voyage from Palos, Spain, to Buenos Aires already behind them, Com. Ramon Franco and his two companions in the seaplane Plus Ultra are keen to resumu their flight toward Rio de Janeiro, 1264 miles distant.

The big seaplane, which crossed the ocean Saturday from the Cape Verde Islands to the Island of Fernando do Noronha, a distance of 1432 miles, jumped the 279 miles to the mainland, and vol-planed gracefully on the waters of the harbor. The throng lining the three miles of quays cheered lustily, while a whistling chorus of welcome was sent up by ships and tugs in the harbor and automobiles

Immediately Commander Franco and his two companions had made things shipshape aboard the seaplane they were taken by a reception committee on board the Brazilian torpedo boat destroyer Plauhy and landed. They are guests of the Government at the Palace

The Plus Ultra not only is making a historic flight, but also is making fine time. Since leaving Palos, Spain, it has flown 3585 miles at an average speed of about 97 miles an hour. It still has 2647 miles to go to reach Buenos Aires. At present it is the intention of Commander Franco, after visit-

ing the Argentine capital, to point the machine northward and fly to the United States by way of Panama and Cuba and then return to Spain by way of the Azores Islands.

controversy in the General Assembly which appeared to be confusing, regarding the status of the State College of Rhode Island as a land grant college. Dr. Ranger explains that the term land grant signifies simply the source of financial aid of the institution, and does not affect the scope of the college's teaching. He points out that federal aid is measured by the support which the

State gives to the college.
Dr. Ranger, in explaining the situation, says that agriculture, one of the State's industries, claims the greatest amount of attention from the energies of the institution. He asserts that the economic needs of Rhode Island as an industrial state are being admirably met by the college, which in 20 years has made greater strides than any institution of learning under his attention. Dr. Ranger says he is fully confident that the General Assembly will act liberally toward the college.

This may not always than stenography or typewriting or

Striking Miners Work Abandoned Property

By the Associated Press

Wilkes-Barre, Pa., Feb. 1 TULL-FLEDGED anthracite min ing operations with striking miners as operators have begun on Wilkes-Barre Mountain. More than 100 men are engaged in the work, and an average of 80 to 125 tons of coal is being produced daily.

The mine was formerly operated by the Red Ash Coal Company, which surrendered its charter and dissolved a year ago. The "squatter miners" have not yet been molested, the authorities refusing to allow-the mining to be interrupted because the company non-existent and no taxes have been paid for two years.

ASK BETTER FILMS FOR THE CHILDREN

Speakers See Way to Improve Public Taste and Demand

RHODE ISLAND COLLEGE

The Northern Heavens for February Evenings The brilliant planet Venus, which

By EDWARD SKINNER KING

The Constellations

The constellations have advanced

AT THE recent new moon, many persons probably noticed the phenomenon called "the old measures could be made at widely moon in the new moon's arms." The silvery crescent, hanging in the western sky after sunset, seemed to enour globe. fold the dark rotund body of the moon. Comment was made concerning the unusual brightness of the shadowy portion of the orb.

The "old moon in the new moon's arms" may be seen every month, yond the meridian, apparently sweepwhen the crossent is in the west, but ling the winter constellations to the when the crescent is in the west, but not so clearly. The same appearance can be seen before new moon, when the phase has reduced the old moon to a crescent in the eastern sky. As the phases of the moon from "new" to "full" seem mysterious to some we may say that the change of forn at different times during the lunar month is governed by the position of the moon relative to the sun and earth. Just as half of the earth is always in sunlight and the other half in the shade of night, so it is with the moon. When the sun is far to one side, we see only a small portion of the illuminated lunar hemisphere turned to the sun—a mere sickle of light at first which gradually increases. The rest of the side of the moon toward us lies in its own shadow. The bright border of the crescent marks the advancing line of

sunrise over the lunar surface.

The dark portion of the moon becomes visible by sunlight reflected from the earth. As terrestrial scenery on a moonlight night is brough out under the silvery light of the moon, so we see the lunar landscape under the flood of "earthlight." The earth-lit features during the lunar night are most striking in a tele-scope. The general ash-grey light over the surface gives way to bright points according to the character of the topography. One lunar crater, called Aristarchus, glows with such a lurid light that it has been taken for a volcano in eruption. The tint of the earthlight is due to the double passage of sunlight through the ter-restrial atmosphere. It is more or

less the hue of sunset.

We are now able to understand why the "old moon in the new moon's arms" may be brighter at one time than at another. The presence of clouds in the earth's atmosphere, the extensive snow fields of winter, or any such variation affects the earthlight on the moon. In a word, the climatic and meteorological condi-tions on earth are seen reflected in the moon. We see ourselves as others see us. Nearly a century ago, a noted astronomer remarked that with better photometric instruments at our command, we might read in the moon the average "condition of the diaphaneity of our atmosphere."

Photometric measures of the sort have been inaugurated at the Harvard Observatory, and preliminary results obtained. The process is photographic and is based on the following propostion. "If a star is photographed out of focus so that its image is of the same size and to dits brother Pollux. The ancient to its brother Pollux. The ancient take any bright star. After photographing it at settings of focus to give images of comparable brightness with the moon, it is easy to allow for all differences from the above proposition. By such means we may to its brother Pollux. The ancient 7,700,000,000 marks.

By such means we may Procyon. ticular area of the moon, either on the sun-lit or on the earth-lit portion. Were the whole dark hemition. Were the whole dark hemi-sphere of the moon turned toward the Heart of the Serpent, is also us, the results of the Harvard measures show that its total brightness count of its isolation. The Cup and the brighest star in the sky. More- Leo rising high reminds us that over, the ratio of full sunlight and full earthlight falling on the moon is about 10,000 times. Earthlight is much greater than moonlight, not only because the earth has a large disk as seen from the moon, but its surface seems to possess greater reflectivity. Indeed, the moon is a rather poor reflector, its surface being comparable with weathered sandstone. over, the ratio of full sunlight and

Measures of the earthlight on the moon are now being made also under the clear sky at the Harvard station in Peru. Most of the observations are obtained with ordinary photographic plates, which are sensitive chiefly to blue light. Other plates are also used which record the brightness in terms of yellow light, and therefore more closely approximate visual est mates. Eventually we shall be able to gauge the color of the earthlight and to co-ordinate the results with

BILL SEEKS LARGER BUYING OF LAND FOR STATE FORESTS

Forestry Association Claims Valuation Gain of \$1.11 an Acre in Five Years—Idle Land Called Economic Outlaw

Purchase of forest lands by Massa- and yet we continue to pay other chusetts in the past five years has people millions of dollars for our lumber. netted the State in improved valuation, \$1.11 per acre on 76,898 acres, chief causes of high rents in Massaexplained in a bulletin issued chusetts. It alone has added about today by the Massachusetts Forestry 25 per cent to the cost of building Association, which urges additional dwellings, in the past 12 years, and purchase of 150,000 acres each year unlike the cost of other materials, for the next 10 years.

In a bill reported by the Massagrow more timber at home for our chusetts Legislature's Committee on Conservation and now pending before the House Ways and Means Committee, increase of annual purchases from 100,000 acres to 250,000 acres is provided. About \$125,000 a year will be required, it is stated by a sizable profit for the State, it is explained, because forest lands are constantly increasing in value. No only does the actual value of the timber improve, but worth of such lands in conserving water supplies and in preserving unassessable beauties is a contributing

association's bulletin ex-

plains:
"In view of these facts the association believes that the state forest acres more as state forests because is fully that much land now lying idle in small towns which will be reclaimed by other agencies. And since less than one-third of the money authorized by the act of 1920 ther authorization of appropriations.

"In order to round out the present purchase areas and make the present economic administrative units, it will be necessary to acintervening and adjoining No appropriation is necessary-merely the authorization to extend the area of state forests.' Discussing the necessity for more tate forests, Mr. Reynolds says:

"Idle land fit only for timber growing is an economic outlaw. Like a sneak thief it appears in the community while the people are asleep for protection against fire, insects fungi, not because of its own value but because it harbors menaces to other property. It is a highwayman of the first order because its existence forces the public to spend millions of dollars to build roads over and around it toward which expense it contributes nothing. One-fifth of the land in Massachu-

setts is in the outlaw class.
"Most of this land is located in towns that have been going steadily backward and no agency other than the State can reclaim it. Forty per cent of our towns have fewer people than they had 50 years ago.

"Over 80 per cent of our lumber is imported and hundreds of millions of feet are brought from the Pacific Coast annually. The freight alone on this lumber costs more per 1000 feet than it would cost to grow good facturing corporation exist that allowed one-third of its plant to stand idle, while it bought its product at twice the cost of manufacture in its own plant? One-third of our forest land, about 1,000,000 acres, is idle

MR. READING OUT

Middlesex Prosecutor Promises Strict Enforcement

Drastic, vigorous and fearless enforcement of the law is the need of the hour in Massachusetts, said Arthur K. Reading, district attorney of Middlesex County, last night, in announcing his candidacy for Republican nomination for the position of State Attorney-General. Mr. Reading's official announcement has been expected for some time, and during the State had no interest in religious the work. Only let our boys and coming week other candidates are expected to make known their intention of seeking the office.

Sanders, government crop statistician, sees a rem-

Potato growing in the United determining hand, he says. After a series of lean years 1924 brought a bumper crop and such low prices that growers and whole communities brought close to bankruptcy. But 1925 brought a crop short of the previous year's total by more than 100,000,000 bushels, or about 25 per cent. Prices skyrocketed in some regions 400 per cent. Protests and boycotts by consumers were unavailing.

Mr. Sanders things such violent fluctuations in crop and price could be prevented.

"General use of certified seed," he said, "better methods of culture, care and marketing—all within control of the grower—would very much lesson producers' problems and work to the advantage of all concerned.

against irregular price movements. He made it plain, however, that it might be impossible to make any great advance in combating un-

favorable weather.
Mr. Sanders pointed out that prices varied out of all proportion to production. Even a comparatively small surplus means loss to the grower. A comparatively small shortage enormously boosts prices Maine, the leading potato State, had in 1925 a drop in production of 22½ per cent. Yet the value of the crop was estimated at \$68,340,000 as com pared with only \$18,963,000 in 1924 and a five-year average of \$22,521,000. The practice of the farmer is changing. There was a time when

confer United States citizenship on inhabitants of the group and the latter to establish a limited form of self-government patterned after the American model upon the islands. This first hearing, however, was devoted to general discussion of the subject in which representatives of the islanders and the Navy Departme were heard.

H. V. Berg, member of the Council of St. Croix, said that members of elective bodies, such as he, all favored autonomy, while those now vested with authority desired continuation of the present arrangement. Asked for his suggestions he advo-Islands was given consideration by the House of Representatives Comfrom the other two islands and its incorporation as a municipality of Porto Rico, 40 miles away.

This step he advocated since St. Croix was agricultural, whereas the two other islands were mainly industrial.

\$150,000 deficit, now contributed by the United States, he said the funds would have to be secured by creased taxation upon the inhabitants and properties of the islands.

Rear Admiral Kittelle, the third governor of the islands, appeared and said that the islanders were fine peo-ple and were not suffering from any basic troubles. The placing of the territory under the authority of the United States had destroyed manufacturing and shipping industries on account of the prohibition law, so the principal problems were economic and not political in any local sense. The actual government of the islands, he said, was a very simple affair. He advised the committee to send a sub-committee to investigate on the spot.

He favored that the inhabitants be given citizenship and that the judicial system be changed so that appeals could be made to federal courts in Porto Rico instead of to those at Philadelphia, as is done at

present. D. Hamilton Jackson, lawyer, who represents a large section of the col-ored population of the islands, denied the statement of Admiral Kittelle that the naval administration had established public schools, claiming that such schools had existed there since 1878. He said it would be useless to send a committee to investigate, since all such investigators were invariably tion and converted to their viewpoint. He said legislative relief was urgently needed, since present conditions were such as to cause an exodus which would soon deplete the population. Hearings will be continued next

MANY CHANGES IN BASEBALL RULES

Pitching Regulations Feel the Brunt of Alterations

NEW YORK, Feb. 1 (A)-Revision including extension of hor run park limits and a more liberal application of the sacrifice fly rule, yesterday, required approval of almost application of the sacrifice fly rule, 23, when Tottenham Hotspur, West yesterday, required approval of almost 100 changes by the joint rules committee of the major and minor basewas then called the third round proper.

Revision of the pitching regulations of permit the use of resin, approved by the committee Saturday, was written into the rules yesterday, requiring that "under the supervision and contact "u ten into the rules yesterday, requiring that "under the supervision and control of the umpire, the pitcher may use, to dry his hands, a small finely meshed bag containing powdered resin, furnished by the league." No application of the resin to the ball will be trous exhibition of soccer, but showed that Villa must be reckoned with, having it permitted, the committee announced. Balls hit into grandstands, to count as home runs in the future, must travel 250 feet, an increase of 15 feet over the former limit. Major league parks, however, will not be affected

parks, however, will not be affected by the change.

Coaching boxes at first and third bases were reduced to 15ft. rectangles, the rest spell between doubleheaders was increased from 10 to 15 minutes, while winning home runs in the last half of the last inning, fo be scored as four-base hits, will hereafter require as four-base hits, will hereafter require the batsman to complete the circuit. It was explained by the committee that in some games last year, where mere singles were required to win, batters who had driven the ball into the stands when the control of the stands of the control of the stands of the control of the stands when the control of the stands who had driven the ball into the stands ouched only first base and then ran othe clubbones.

intentional pass rule from an unusual angle, taking the steps to prevent the issuing of bases on balls through throwing the ball to a baseman, rather.

The glorious uncertainty of Cup Ties

substitutions shall be made while the ball is in play, complaint having been made by a minor league club that a player substituted for a catcher just as the ball was thrown to the plate by the pitcher, made a foul fly catch near the dugout.

Delay of an hour and a half in a game last year resulted in a rule.

PRINCETON, N. J., Feb. 1—Franklin and Marshall College defeated Princeton University in their dual wrestling met Saturday by the score of 17 to 10, but the Tiger captain, T. V. Buttrey, and H. E. Meislahn Jr., Tiger heavyweight, prevented a complete rout by throwing Captain Horner and Kunkle, Philadelphians.

Pressed to Win

PACIFIC COAST CONFERENCE BASKETBALL STANDING

STANFORD UNIVERSITY, Calif., Feb. 1 (Special)—A clean-cut shot from the side court near the center of the floor in the last minute of play proved the deciding factor in the first game of the annual University of California and Leland Stanford University basketball series here Saturday night, and gave the Californians an 18-to-17 victory. It had been a hard-fought game throughout and the lead changed often throughout the contest. California had been expected to win by a large magrin.

last five minutes, when California was leading 15 to 12. He repeated his feat of the first half, was again fouled and again added four points to the Cardiprominent, swept through Munro and Noble with ease and bombarded Benedict from close range. Finally the latater broke down under the assault and ter broke down under the assault and mediately by the winers however.

mediately by the winners, however.
The large audience was surprised at
the result of the game. Coach Andrew Kerr's team played its best game of a poor season, being good especially on defensive work.

The victory practically assures California the championship among the three California members of the Pacific

Coast Conference. California has new defeated University of Southern Cali-fornia twice and Stanford once. Should Stanford win the next two from Cali-fornia and once more from U. S. C. the result will be a tie between Caliornia and Stanford. The summary Holmes, Butts, If. rg, Anderson, Mitchell Watson, rf. ... lg. CUP TIES BRING MANY SURPRISES

By Cable from Monitor Bureau LONDON, Feb. 1-Saturday saw the verthrow of many giants in the burth round proper of this season's burnament for the Football Association Cup. Sheffield United, the present holder of the trophy, helped to provide the biggest real surprise of the day by losing to Sunderland at home before a ecord crowd. Cardiff City, unsuccess record crowd. Cardiff City, unsuccessful finalists last year, fell at home to Newcastle United—it is the first time that Newcastle has ever won at Cardiff. Huddersfield Town, the reigning league champion, followed precedent when it lost once more to Manchester City at Manchester and Derby County, at the present time the leading team in division two proved unable to cone division two, proved unable to cope with South End United, a side placed midway in the standing of the south-ern section of the third division.

For London teams though it was a memorable day—the brightest they have known in Cup competition since the war. Four metropolitan sides—Arsenal of the first division, Fulham and Clapton Orient, both of the second division, and Crystal Palace, third division—went through safely into the division-went through safely into the Hotspur and Millwall of the first and third divisions, respectively, will do so if they win their replays this week, and only one. Chelsea, of the second division, fell by the wayside. Anyhow London is assured of four sides in round five, which is more than it has had at the corresponding stage of the competition since the season of 1922-

mittee of the major and minor baseball leagues at the closing meeting of a two-day session.

Most of the amendments necessitated only slight modifications to meet possible contingencies, the outstanding change, making sacrifice flies effective in all cases where runners are advanced a base. Hitherto a sacrifice has been allowed on a fly ball hit when a runner scored after the eatch.

ing a bright prospect this year of eclipsing its own record of six wins in the tournament. After one had seen Manchester City's skill in its reply against the Corinthians in the last round, their victory over such redoubt-able opponents as the league cham-pions, Huddersfield Town, hardly came as a surprise. Manchester's other team — United — visited London and brought with it many eager support ers who, on Saturday evening, made the thoroughfares bright with gay favors. The Lancastrians did not win against the popular Spurs, but acquitted themselves full well and will to the clubhouse.

The committee hit at violation of the intentional pass rule from an unusual ous round. Not for many years has

issuing of bases on balls through throwing the ball to a baseman, rather than to the catcher. The amended rule now reads that with the batsman in his proper position, "the ball shall not be thrown by the pitcher to any player other than the catcher . . except in an attempt to retire a baserunner."

If repeated after warnings by the umpire, the rule adds, the pitcher shall be removed from the game.

Another change provides that no substitutions shall be made while the ball is in play, complaint having been to have been outplayed by Chelsea. Instead of form running true, however, Palace rose to the occasion as they have often done before and by greater opportunism qualified for the fifth

Delay of an hour and a half in a game last year resulted in a rule amendment deleting the clause giving the umpire permission to prolong contests after a 30-minute intermission on account of rain. The rule now reads that at the end of a half-hour, the "umpire shall have authority to end the game."

The alteration of the off-side rule seems to have had a marked effect upon scoring in Cup Ties. Saturday the Weishmen from Swansea Town, against 37 at a corresponding period last season. The results:

Swansea Town 6, Stoke City 3; Cardiff City 0, Newcastle United 2; Fulham 3, Livernool. The alteration of the off-side rule last season. The results:

Swansea Town 6, Stoke City 3; Cardiff
City 0, Newcastle United 2; Fulham 3,

Bush and Tobin Are Traded to Washington

By the Associated Press

St. Louis, Feb. 1 THE St. Louis American League A Baseball Club today announced the trade of L. J. Bush, veteran pitcher, and John Tobin, outfielder, to the Washington Senators for J. T. Zachary, left-handed pitcher, and N. W. Ballou, a young righthanded pitcher. No cash was in-

Ballou is the recruit pitcher secured from Chattanooga last July by the Senators, who made a fine impression in the innings he pitched in the World Series and in the Senators' pennant drive during the last of the 1925 season. Bush hardly needs any introduction to baseball fans. He has figured in five World Series, beginning his career in Montana and starting in the majors with the Athletics. Zachary is a left-handed veteran who won honors in his first year in the majors after leaving college. He has always been with

PROVIDENCE IS WINNER
PROVIDENCE, R. I., Feb. 1—The
Providence soccer eleven gave New
Bedford a 5-1 setback in an American
Soccer League contest played here yesterday in a driving rainstorm. Despite
the inclement weather, a crowd of 3000
total virtues outplayed the Whalers during the entire 90 minutes, a penalty on McAuley
in the last minute giving Stevens the
shot that brought New Bedford its only
goal. Curtis and Hogg shot two goals
River. The winning goal was made just
before the final whistle by White.

Harvard Defeats Princeton Again

Tigers Lose by 4-3 Score in Exciting Hockey Game at Arena

"BIG THREE" HOCKEY STANDING

Harvard University assumed a big lead in the race for the "Big Three" collegiate hockey championship last night by defeating Princeton University 4 goals to 3, at the Boston Arena. It is the Crimson's second successive win over the Tigers and since the Princeton sextet has a decision over Yale, Harvard is well out in front. According to statistics the Crimson skaters should defeat Yale in their coming clash Feb. 13, but since statistics mean little between these ancient rivals, the Championship is still very much in doubt until the schedule is actually completed.

The first meeting between Harvard and Princeton went into overtime, but and Princeton went into overtime and Princeton went into Princeton Winnipe and Knilcker. The St. Nicholas Minneapolis and Princeton Winnipe and Knilcker. Ale St. Paul and Rincker Albertal St. Paul out

CANADIAN INTERCOLLEGIATE HOCKEY STANDING

W L For Agst Pt

TORONTO, Ont., Feb. 1 (Special)-Opening up in the second period when t displayed flashes of real combination, the University of Toronto de-feated Montreal University by 9 goals to 3 in a senior intercollegiate game here Saturday afternoon. It was the third successive victory of the locals and they are almost certain of repeat-ing their successes of the last seven years in winning the intercollegiate championship. The team in yester-day's game was not extended after the end of the first period; but showed enough at times to give its supporters
the opinion that it is a stronger aggregation than that which went
through to the Allen Cup final series
last March.

In the first period each team scored

In the first period each team scored a goal, but in the second the winners scored 6 while each added 2 in the final 20 minutes. The winners jumped into the lead by scoring the first goal in 15s. and Montreal evened the score near the end of the period. Three goals were scored in the first four minutes of the second period, the first and third being particularly rapid. In each case Trottier batted back the faceoff to one of the defense men and he went through for a goal, Porter getting the first and Plaxton the eight center forward, was the outstanding star for Boston with three goals and Gentle made the other one for the New Engrot of Pennsylvania star, made his profess of Pennsylv

dreams. In a part of my memory and Letters." these landscapes seemed authentic pictures from Barnaby Rudge. It another part I was not so sure of their origin. It was not merely that I could not recall them definitely. was actually beginning to doubt whether any such pictures were in the book at all. "As we drove through one vil-

lage," my hostess was concluding, "I looked about me and felt that I ned to him our ordinarily was gazing upon Chigwell itself.

The horses carried us by the village inn, with its deep-set windows and "When I arrived in London," she went on to say, "the friends who met me put me into another train and took me to their house just out seemed exactly like the Maypole Inn, and took me to their house just out of town, in Essex. It was Barnaby where the major action of the story occurs; I felt I had but to enter the doors to find all the characters gathered round the hearth."

She had described the Maypole Inn so well that my memory was thoroughly satisfied. Yes, yes, I said to myself quickly; descriptions of the Maypole Inn are frequent in the book. I could recall numerous instances. But the background for it the countryside—and the forest on the borders of which it stood? No.

my confusion in this talk. Of what had in all my readings hitherto eswho had thought I knew caped me, I became suddenly aware: Dickens so well, could recall not one description of countryside in the described in Barnaby Rudge. To be sure, I-like my hostess and every body else-had felt during each read back to the conversation, my hostess ing no lack of natural scenery. Most of the story takes place in the counner her drives through Epping For- try, at a little hamlet on the borders of Epping Forest; and I had pictured not only the Maypole Inn of that village, which the author called Chiggnarled roots ran along the ground, well, but also the countryside, the forest, everything. So had my host-4 4 4

> Later in the evening, as soon as had returned home, I hurriedly took down my worn copy of Barnaby Rudge and began to turn the pages, my eyes searching from paragraph to paragraph. Far into the night I was still busy, for the book is oldfashionedly long. I found descrip-

matter; and no doubt in the memory depict Barnaby's rural delights: the bright red poppy, the gentle ants and hid far down-deep, deep in hollow places-like a silver pool, green or yellow for her design. where nodding branches seemed to bathe and sport; sweet scents of laws of sampler-making, came the summer air breathing over fields of alphabet in the bravest of capitals trees, and shadows always chang-

Those two are the only descriptions of landscape I could find in used again for G, O, R, and U, and Barnaby Rudge. Scarcely more than low, brown, pink, orchid, pale blue, a hundred words in all.

There are several passages describing storms, both of wind and is the same as that said to be signirain, but not their effect on field or forest. Dickens especially loved twenty blackbirds," as both J and V earth, sky and air, and with them he delineates many moods such as the following: "It was on one of those morn-

ings, common in early spring, when the year, fickle and changeable in its youth like all other created things, is undecided whether to step backward into winter or forward into summer, and in its uncertainty inclines now to the one and now to the other, and now both at oncewooing summer in the sunshine, and lingering still with winter in the shade—it was, in short, on one of those mornings, when it is hot and cold, wet and dry, bright and low- in the irregularities of space and ering, sad and cheerful, withering and genial, in the compass of one

CHILDREN'S PAGE

The Wonderful Party

WONDER what I could do to give the dolls a bit of pleasure?" thought Lucy to herself one cold and dreary afternoon. She had been in ited to a party, but they had not; and the little girl could not bear to think that while which she had provided for them. she was away enjoying herself, per- Everything was just the same as haps they would be feeling lonely.
"I know what I'll do," she exdifferent! The grandfather's clock,

claimed, suddenly. "I'll give them a for instance, could really tick, and party, too." And without wasting the kitchen stove would really light! another moment, she set to work to get things ready. Nurse would be coming in a few minutes to dress her for her own party, so there was her for her for her own party, so there was her for her for her own party, so there was her for her f take long, and very soon prepara- the dolls as a make-believe gramo- less set now, and it works perfectly! tions were all completed, and Mr. phone, was a gramophone! And all a fact which made the little girl he quickly slipped into his Indian costume and met him in the yard.

Herbert. were all completed, and Mr.

Heaving a sigh of satisfaction, the little girl flung herself down upon the cozy hearth-rug, where she lay gazing into the fire at the wonderful pictures that came and went con-

Wheels Upon the Carpet Presently, she was startled by the sound of tiny wheels upon the carpet, and something that sounded uncommonly like a motor-horn in the distance, and, looking round, she

was amazed to see the dolls' wee car gliding swiftly toward her. All the lamps were lighted, and the little car looked very fine as it sped across the nursery floor. At Lucy's feet it came to a standstill, and the smart little chauffeur, bowing low, opened the door and invited her to step inside. Utterly bewildered, she obeyed, and was

surprised to find that there was plenty of room for her; and soon was snuggled down amongst the rugs and cushions, and speeding away toward the dolls' house. Her next surprise came a few mo ments later, when they rounded one of the legs of the table, and the house itself suddenly flashed into

At the front door Mr. and Mrs. Doll were waiting to welcome her. So was Toby, the little china dog which she had bought from a man in the street, just a few days earlier. Toby was ever so pleased to see her, and expressed his joy in the usual doggy fashion.

A Warm Welcome

are to see you," cried Mrs. Doll, as which Lucy had painted looked just pretty little Dutch girl off the man-she hastened forward to greet her like real pictures, and not a bit like telpiece, to the spick and span baker, "All r

clinging about Lucy's neck, and begging her to tell some funny stories.
"Never mind about funny stories," interposed Mrs. Doll. "Let's have some lemonade, first, or we'll have those visitors here before we know where we are." So they all went downstairs to the dining room. To Lucy's joy, Toby and the tiny fluffy kitten were allowed to join them, only they had to sit on the floor.

Toyland Station Calling '2TL, the Toyland station, calling!"

"Gracious!" exclaimed Lucy. "It really works!"
"Why, of course," replied Mrs.
Doll, "what would be the use of it

"But it's—it's—" began Lucy.
"Oh, never mind what it used to time to lose. However, it didn't ordinary box which Lucy had given be," laughed Mrs. Doll. "It's a wire- morning." And away he went.

Soon the guests began to arrive.

The Most Precious Pearls

ON'T forget to throw the stance hardens and becomes a beauwood into the basement, tiful pearl." called Mrs. ready to start.

"All right," said Billy. "Maybe

On and on they wended their way

"Oh, I'm sure these are bear

tracks. Look," shouted Billy. "I'm going to follow them."

After a long silence Herbert asked

"No," whooped Billy, "but let's see where this path leads."

Soon they were scampering noisily

down a steep slope which led to a

rickety landing where an old man

"Upon my word," said the old fish-

erman with a twinkle in his eyes, "I thought a tribe of Indians were on

my trail when I heard you coming

"Over there," nodded the fisher-

"Don't you get tired of fishing?" questioned Herbert.

"How can anyone fish for pearls?"

"Jewelry stores," responded Billy,

"Would you like to know how the

jeweler gets them?"
"Yes," burst out the two voices in

"In the first place," commenced the

oysters. But not from the ordinary

oysters, as most people believe. The

outer shell of a pearl oyster is rather rough, but the inside is lined with

plained the fisherman, "Your In-

dian suits remind me how the In-

dians used to get them. They went out in a canoe. But at present

schooners are used instead. The men who dive for them wear diving

suits. After the oysters are brought

ashore they are opened with a knife

the shell?" asked Herbert.

"But how do the pearls get inside

"Boys, that is the most beautiful

part of the whole story," continued the fisherman. "Oysters are among

the most peaceful of all living crea-

tures. When they are very tiny they

swim through the water frolicking here and there. At the end of this

short career they sink to the bot-

tom of the sea and fasten them-

selves to rocks by means of tiny flaps that were formerly used for

swimming, and there they are con-

"They settle very close together, and naturally as they grow larger

they become very crowded, so crowded in fact that often their shells

are formed imperfectly. But it

never occurs to them to push or

another as people sometimes do, and well may the oyster boast. No court to settle disputes in oyster land, For each one daily takes his own affairs in hand.

"Of course they really haven't any

troubles for a court to settle," in-"But they do," proceeded the fisherman, "for often tiny marine worms or other little creatures bore

into the oysters' shells, or grains of sand get between the shells and irritate them. In a case of this kind

they neither complain nor fight back

than the openings at the top and bottom of the cylinder, and ran a small runner of thread round the edge of each. One of the circles was sewn to the bottom opening, and Mother then dropped the large marble inside. The second round of velveteen was sewn to the top opening, making it look like a little cap.

Out of the piece of ribbon a coat was cut out, the neck of it fitting round the middle of the cylinder, the coat coming a wee bit below the botton of it. Two little velveteen legs were then made and sewed to middle of the bottom bag, and cardboard feet were added. Two hands were next made from the piece of white kid glove and sewed

into the cuffs of the coat. A comical face was drawn and painted on the white piece of uncovered cylinder, showing above the neck of the coat. Then Mr. Tumbling-Dumpty was placed on a slop-ing board, and at once he began to turn somersaults down the incline.

the next morning, Cutey-Kit awoke and began to think very deeply. All the geography she had learnt was actually sizzling and finally it bubbled over in up the three bonnets in a green words. "I have come to the conclu- cardboard box tied with red string, and after a ramble all through sion " she said addressing the clean-Skansen and a peep at the great smelling Swedish air, for nobody reindeer with enormous horns that was awake to listen to her, "that live in the park, our three compan-ions settled down for a quiet night countries all over the world are very nuch alike. Even in Barbados and under the deep blue Swedish sky. Texas, there were parts that looked like England, and now in Sweden, there are parts that might be Guern-

sey or America." At that moment Shy Squirrel suddenly awoke, "I agree with you," said she, as she shook her fuzzy coat and began to open a can of Nestle's milk for Cutey-Kit's breakfast. "But the thing that strikes me most of all is the ubiquity of the pine trees." "I don't know what ubiquity means," answered Cutey-Kit, "and I don't believe that there is any such word anyhow."

"It is quite a simple word," said Shy Squirrel, looking in the Webster, "and it means being anywhere or everywhere at the same time. That being so, pine trees are the most ubiquitous trees I know, and as I am particularly fond of them, I am delighted to meet so many of them By this time Beau St. Bernard was

wake, had finished his dog biscuit, and was beginning to plan out the

"Stockholm is a city I have always longed to visit." he remarked. 'It is built on seven islands, which means plenty of cool, sparkling water, and I know it must be most interesting and beautiful, and we shall get a splendid view of it from our air machine."
"I believe," said Shy Squirrel,

consulting the guide book, "that there is a place called 'Skansen,' just outside Stockholm: and I should like

to go and see it."
"Certainly," answered Beau St Bernard, and in a few minutes they alighted just outside the gates of Skansen. Skansen is a fascinating

place. You go through the great gates into a beautiful park, with wooden houses, built as they used to be built years and years ago, and all the people dressed as they used to dress, years and years ago. When Cutey-Kit peeped inside one of the houses, she saw a huge wide fireplace with an iron cauldron swinging in front of a cheerful log Then there were wide beds built into the walls, and Beau St. Bernard, who seemed to know quite a lot about it all, explained that even now in the depths of the coun-

A Half-Century Edition

Science and Health

Key to the Scriptures

MARY BAKER EDDY

To mark in a simple and appropriate manner the completion of a half-century since "Science and Health" was first published in 1875, the Trustees under the Will of Mary Baker Eddy have authorized the publication of a HALF-CENTURY EDITION of the pocket-size Textbook.

This special edition has a title page in two colors, and is bound in maroon morocco, limp. round corners, gilt edges, uniform in size with the regular black morocco pocket edition.

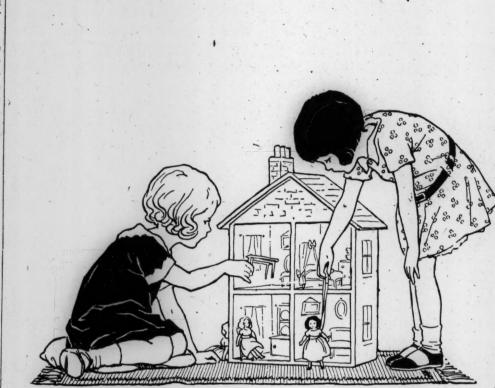

PRICE, ONE COPY, \$5.00 Six or more to one address, each \$4.75

Orders for the pocket edition of "Science and Health with Key to the Scriptures" should state plainly whether

the maroon or the black morocco edition is desired. Orders and Remittances should be sent to

HARRY I. HUNT, Publishers' Agent 107 Falmouth Street, Back Bay Station, Boston, Mass.

NOTE—"Science and Health with Key to the Scriptures" is published in fourteen different styles and sizes, which are listed in the advertisement on the Home Forum Page of this newspaper.

clouds mean rain before long.

Dumpty?" Mother asked "A Tumbling-Dumpty!" cried Mar orie. "What is that?"

"I will show you," said Mother.
"I have got together all we shall want

"Any luck?" asked Billy, peering 0 0 1 "Oh, of course I'd rather fish for "Don't you know where pearls come from?" fisherman. "pearls are obtained from

> in this box. Here they are," and Mother took out:

Mother took out:

1. A piece of cardboard four inches long by seven inches wide.

2. A narrow strip of brown fur six inches long by one inch wide.

3. A scrap of bright-colored velveteen.

4. A scrap of some softer material of a contrasting shade (a piece of wide ribbon will do).

5. A large glass marble (the larger the better).

6. A small piece of soft white kid cut from an old glove.

7. A pair of scissors and needle and cotton.

First taking the piece of cardboard, Mother rolled it into the shape of a cylinder and sewed it firmly down where the two edges overlapped. Having done this, the strip

of narrow fur was sewn round the edge of the top of the cylinder. "This is Mr. Dumpty's hair," she said. "Of course, if I hadn't had this little piece of fur we could have used white cotton wool instead, giving him white hair."

She then cut two circles out of the velveteen considerably larger

cally as follows:

Negotiating the Step from Arithmetic to Algebra

The fault, however, can hardly be said to lie with the student; rather should he as a rule be given credit for obtaining a very good working knowledge of the subject in spite of any shortcomings in its presentation; neither should it be too strenuously argued that the teacher is to blame or that textbooks are too formal and therefore inadequate; the real reason, as the writer sees it, is a certain disunity or lack of continuity which at present osten-sibly exists between the primary subject of arithmetic and the slightly more advanced and abstract subject which logically follows; that is, alge-bra, or, as Sir Isaac Newton preferred to call it, universal arithmetic. To be sure the separation is not a pronounced one, but it is, perhaps, just this subtle phase of the general tendency that is doing the mischief. Hence the reason for the mischief. Hence the reason for the higher numbers also, as symbolized not exactly new, have not been made by combinations of these digits, are practical use of, and are therefore in no sense different from them offered in the belief that if used in This can be easily done, for just are conjunction with any good text the establishment of the logical conthe figure 2 is a convenient abbrebasic subjects of secondary mathe- diagram, so the figure 15, for ex-

It should be appreciated first of all that pupils in arithmetic do most of in the latter form being consolidated their work by "rule of thumb" and according to the Arabic notation or not in accordance with a developed theory, and therefore on introducing the subject of algebra the first logical ber, however large, can be expressed step would seem to be to preface the as the sum of several simple num-subject with a few simple theoretical bers, the important point, however, considerations. Perhaps the best not being overlooked that such num-place to start is to put special stress bers as 10, 20 . . . 100, 200 . . . etc., evidently being taken for granted that in the larger numbers, underlies the the correct aspect will be gained whole number system, so that when naturally through intuition, but it is any number is to be regarded from a naturally through intuition, but it is any number is to be regarded from a nevertheless a fact that unless specifically gone into, sooner or later the notion is apt to be unwittingly accepted that the essential nature of the common numbers is that of ordinals rather than cardinals. By this is meant that the figure 4, for example, without which the essence of the is commonly used in two widely dif-fering ways—(a) to answer the question "how many?" in an assemblage regardless of any order obtaining in same, and (b) to designate a single element in an assemblage according to a given order or suc-cession. In the first instance 4 is used in a cardinal sense, while in the

and it denotes the ordinal sense. Twofold Purpose seems just a little unfortunate that the same numbers are made to serve this twofold purpose, for the reason that people, generally, being so used to seeing "things" numbered, as automobiles, houses, days of the month, pages of books, etc., come rather naturally, if not awake to the difference, to regard the numbers themselves as always being just as simple and incomplex as the "things" which on occasion happen to bear

these numbers as a convenient method of designation. But it should always be recognized that these are numbers in an ordinal or serial sense, not in any truly mathematical or cardinal sense, and until this cardinal sense is thoroughly imbibed the subject is pretty apt to continue vague and unsatisfying, largely a matter of the "letter" only and very little, if any, of the "spirit."

THE writer vividly recalls his own early struggles with the subject, and he cannot help feeling from experience that much of the same vagueness which tended to mystify the foundations of the subject then are still much in evidence to confuse the beginner, or, what is perhaps worse, to condone him for his lack of understanding and interest. Manifestly this latter evil, especially, should be strenuously guarded against, for it is inherently mischievous wherever found.

The fault, however, ean hardly be

	andinal	in form	e in char-	from both viewpoints. Take for example the adding of 15 and 3 according to the well-known rules

Education of the All-Round Man

wrest" in next

impossible to be an expert in any training. In other words one has to fragments to one of which they must specialize. And it is exactly to this specialization that we owe the enormous increase in knowledge that is obvious on every side. And so impressed, almost obsessed, are we with the importance of specialization that we have come to look almost with contempt on the all-round man. He is regarded as a dilettante, a

the whole a modern tendency. Certainly the Greeks of the great age Now just as a rigid caste-sys tainly the Greeks of the great age would never have approved of it. To them there would have been something pathetic, almost pathological in the spectacle of a man so wholly taken up with one aspect of learning that he had no time and no eyes for any other side of life. Life, they would say, is many-sided and multicolored. To live life well, to reap the full value out of living, a man must touch life at many points.

An interesting example will show this. The very adjective which the Greeks use to describe the ideal man cannot be translated into English without a bad connotation. Literally it means "shifty." There is no closer translation. What it implies is ver-

translation. What it implies is versatility, adaptability, power of adjustment. Think of the hero of the Odyssey, that great poem which with the Iliad took the place of our Bible in the education of the Greek! What its the perpetual epithet of Odysseus? He is the man of many devices, the opportunist, the master of shifts and wiles and turns—in effect the all-round man. How great a gulf separates ancient from modern thought in this matter!

St. Neots, Hunts, England

St. Neots

great the knowledge and skill re-quired for the man or woman who wishes to excel that it is practically chief object surely should be to prepare them to look at life as a whole, walk of life without an intensive not as split up into innumerably tiny

are due just to this lack of sympathy, of tolerance for the other person's trifler, a Jack-of-all-trades and master of none. The ideal life is that of one who knews about any one subject all that there is to be It is that they tend to promote ex-clusiveness, a feeling of superiority, This craving to be an expert is on what we call roughly "snobbery"- in

Now just as a rigid caste-system is indefensible in social life because it divides instead of uniting, so is an intellectual caste-system. It also promotes arrogance and superiority, and I do not know which is worse. There must be no snobbishness in the kingdom of learning. And the one way to counteract the strong tendency to this attitude is to quicken the sympathies and enrich the imagination in the schools, to help the young to be sensitive and responsive to all the finer issues of life—that is to develop all-roundness. This aim will not preclude specialism in later life for those who are fitted to become specialists.

Special Correspondence

Special Correspondence

Take the ideal product of the school cannot surely be the specialist. There is a place for him, a worthy place, and without him the world would be the poorer. But in reality the number of specialists must be very small, conceivable branch of learning, so great the knowledge and skill retained and they were wrong? At any rate the ideal product of the school and that in teaching any particular art we too readily neglect the greatest art of all—the art of living. It is the person we should try to develop—the educated man or woman. To unfold the full individuality of our pupils—that is the aim, and how great the knowledge and skill repupils—that is the aim, and how better can we do it than by giving

them an all-round education?

The sure touchstone of the value of any training whatever is the life that is led. That is the final issue. In one of the immortal writings of the world, the Phædo of Plato, the content is a content in a conte To live life well one needs above all sympathy, and sympathy means understanding, and understanding and understanding all admirable but all confutable. No all admirable but all confutable. No bring to the maker. We are too much all admirable but all confutable with given to measuring beauty by cost and cents. A real appression sooner is the reader satisfied with one than it is overthrown. And he realizes that an expert logician can shatter any arguemnt no matter how ably supported. But what is the final making, refinement in workmanship, picture that remains in his thought? The unforgettable spectacle of the good man going to the death to which rected to these points, rather than he has been unjustly condemned with to the cost values. All art study the utmost serenity and in clear and confident hope. It is not the argument but the life, not the possession of a keen dialectic, not the subtle thrust and parry of clever speech not the master-mind of the specialist but the individual himself—the man

MIXED PRICE MOVEMENTS IN STOCK MARKET

Reports of Food Company Mergers Strengthen Some Issues

NEW YORK, Feb. 1 (A)—Rising price tendencies ushered in the new months on the New York Stock Ex-

months on the New York Stock Exchange.

While there was a disposition on the
part of some large traders to defer operations, pending the publication of the
figures on brokers' loans, bullish
demonstrations were aggressively conducted in some of the motors, based
on reports of unusually heavy January sales of many of the large many. ary sales of many of the large manufacturers.

Speculative imagination also was fired by rumors of huge food, and other combines. In banking circles wide-spread interest attached to the upward climb of sterling exchange, cables selling at \$4.86 9-16, the highest price paid since the war, and only
1-16 of a cent below gold parity.
South Porto Rican Sugar jumped
6½ points to 140, a new peak, on rumors of an extra dividend, and Great

Western Sugar, Famous Players, Sears Roebuck, Railway Steel Spring, and Peoples Gas all sold 3 to 4 points above last week's closing quotations. A rise in sterling to \$4.86%, the highest demand rate since the war, eatured early trading in the foreign

exchanges. Foreign obligations recaptured the

Foreign obligations recaptured the interest of investors in today's bond dealings when new high records were established by three representative issues—United Kingdom 5½s. German 7s and Czechoslovakian 7½s.

French municipal bonds also were strong. Sterling's close approach to parity presumably accounted for the strength of British bonds, but otherwise there were no new developments.

strength of British bonds, but other-wise there were no new developments to influence the trend of prices. Profit-taking made its appearance in the domestic list, but its effect was offset by buying of industrial liens, which had been neglected recently. New York traction issues reacted 1 to 2½ points, and all bonds forfeited some of their recent gains, but an upward movement included Virginia-Carolina Chemical obligations, Chile Copper 6s, Jacob Doll 6s and Kings County Electric Company 6s. Kansas City Southern 5s and Chicago & Alton 3½s were among the rail bonds in demand.

LONDON STOCK MARKET QUIET

LONDON, Feb. 1-The fortnightly settlement acted as a restrictive fac-tor on business on the stock exchange today. Oils rallied on reports from the United States of an advance in crude

United States of the prices.

There is very little speculative buying in industrials. Rubber issues were dull. Royal Dutch was 33%, Rio Tinto 41% and Courtaulds 6 9-16. The giltedge division continued cheerful.

NEW YORK, Feb. 1 (R)—New prices
of 50 representative worsted suitings, included in the American Woolen Company's opening of fall lines today, represent average reductions of 11% per
cent, compared with a year ago, and a
reduction of slightly less than I per cent,
compared with the opening of spring
lines six monhts ago Prices of overcoatings also were lowered.

FORD MAKING PLATE GLASS
ST. PAUL, Feb. 1—Ford Motor Comany's St. Paul factory will begin
quantity production of plate glass and
atteries in February, marking the plant's
ntry into manufacturing. Heretofore it
has been used only for assembling.

perating income of the New York, leago & St. Louis (Nickel Plate) for 5 amounted to \$12.093,291, an increase \$1,132,574 over 1924,

EXPECTS BUSINESS RECESSION

A note of conservatism is sounded by C. F. Childs & Co. ii. the February issue of their Investment Bulletin from the point of view that bresiness activity may have reached its peak and that a recession rather than a firther advance may be expected.

WHEAT PRICES

RISE, BUT CORN

AND OATS EASY CHICAGO, Feb. 1 (AP)—Despite a wavering start, wheat prices took an early swing upward today. Active buying by houses with eastern connections was chiefly responsible. Current reports indicated absence of any pressure of Argentine offerings in Europe and also pointed to a decided cession of the farm movement of Canadian what to market.

Opening prices, which ranged from ½c decline of ½c advance, May (new) \$1.76@1.76½, and July \$1.53@1.53% were followed by a rise all around, with May touching \$1.78 and July \$1.54½.

Corn and Oats were easy, influenced by large corn receipts of 569 cars here. After opening ¼c off to ¼c up, May 84¼ @84%c, corn scored slight gains and then receded to below Saturday's finish.

Oats started ¼@¼c lower to ½c advance, May 44%c. Later all months showed some loss.

In line with hog values the provision market held about steady.

sion market held about steady. be expected.

WEEK'S REVIEW OF FOOTWEAR AND LEATHER

Ladies' Canvas Low Cuts and Calf and Kid Shoes Popular-Outlook Good

Contracting for spring and summer footwear has now entered upon the second month of its lightweight sea-

Bon.

Basing judgment upon the amount of business already obtained, and from opinions gleaned from buyers, the general belief is that duplicating will be an important feature from now till late into the summer months.

The latest mode to assume a positive comeback is the once popular line of ladies' white canvas low cuts which entered a period of obsolescence about a decade ago.

entered a period of obsolescence about a decade ago.

Late last summer the demand for white shoes, though small, caused some comment, but the earnest attention buyers displayed during the sampling of warm weather footwear, with initial orders fair in volume, and recent duplicating by the larger wholesalers, have all helped to convince manufacturers that white fabric footwear will regain its long lost place as an important factor in today's shoe markets.

markets.

The present call for ladies' shoes is largely confined to the delicate shades offered by the calf and kid tanners who, not daring to stock up on them, are running their tanneries over-time to fill back orders, and treat late buyers fairly. Men's shoes are well booked up by some manufacturers. Prices are suited to meet the wants of all comers, and at the same time render more

suited to meet the wants of all comers, and at the same time render more value for the money asked than ever before in the history of the business.

Lines of the so-called stirchdermore whether men's, women's, misses' or childrens', are maintaining their reputation as medium-priced footwear, and are practically considered as staples by the trade.

Viewing the shoe situation from all angles, future prospects strongly favor a steady activity at all central points, with an increasing cost tendency quite probable before long.

Sole Leather Irregular

Sole Leather Irregular

There is a steady movement of sole leather at mixed prices, buyers asking for differing weights and tannages. Compared with quotations of a year

Oak sole leather tanners report the demand varying weekly, sizable lots being exceptions notwithstanding the favorable conditions at the larger manufacturing shoe marts. Tannery

manufacturing shoe marts. Tannery run of oak steer backs range in price from 44 to 48c, and oak tanned cow backs are offered at 40-44c.

Prime scoured oak backs are still strong at 48-50c. Choice oak bends carried by the finders are quoted by the tanners at 65-70c. Texas bloom bends sell at 75c. Selected heavy oak backs are 50-52c.

Oak offal has a strong and active Oak offal has a strong and active

Oak offal has a strong and active demand and stocks are low. Rough double shoulders are often sold down to bare floors, carload lots for welting bringing 44@45c. Single shoulders are quoted at 32@34c.

Prime No. 1 bellies, standard tannages, are firm at 28c, with the regular run bringing 24 to 27c. Oak heads are in no great abundance. Prices are strong, the first choice selling at 15@16c, with a firm upward trend.

Union, sole leather is in fair demand weekly. Prices are strong and supply moderate. Packer heavy steer backs sell at 46@48c. Medium weights move the better of the two, and bring 44@46c.

Backs and Offal Strong Backs and Offal Strong

Light weight packer cow backs are well sold up, late bookings being entered at 44@45c. Country hide backs are offered at 38@40c. Prime selected bends are obtainable at 55@56c. Union offal is active, with shoulders scarce, and bellies and heads sold close up to receipts. Prime shoulders are 50@31c, bellies 24c, with choice lots bringing 25c. Heads are in good demand at 15c.

The demand for calf skins is improving weekly. The call for modish shades in the lighter weights is quite active. Plump skins, colors and black, Conn Lt&Pw 7%pf.112 111

shades in the lighter weights is quite active. Plump skins, colors and black, are selling regularly.

Standard tannages of colors for men's shoes are quoted at 45@48c. Close sorted skins, aniline dyed, bring 48@50c. The call for prevailing colors in weights suitable for ladies' novelty shoes has improved.

Black and ordinary shades of brown, top grades, are quoted at 44@46c, but all novelty shades are offered at 46c and up. Ooze call still moves with moderation. Choice colors are quoted at 52@58c, prime mediums at 40@56c, with 24@35c asked for the cheaper grades.

with 24@35c asked for the cheaper grades.

New business in the side upper leather market shows a steady improvement. Buying is frequent, but seldom in large quantities. Elk tannages are active, except in the upper grades which are listed at 34@40c. Prime mediums are selling daily at 24@32c, with the cheaper sort quoted at 14@22c, and which is well sold up all the time.

FOREIGN BONDS $3\% - \frac{1}{8}$ 17% - 2% 1% 199 + 12%FOREIGN BONDS POUND STERLING IS HIGHEST SINCE WAR sterling rose on the foreign exchange market this morning to \$4.86\%, the highest point touched since the war. (The gold parity basis of the pound sterling is \$4.86\%). An upward movement is usual at this time of year, but this advance is considered in market circles to have been helped by American and continental purchases, and is looked upon as significant in view of the gold position and increasing competition on the part of foreign loans. The sterling rate eased a fraction during the afternoon. RAILWAY EARNINGS

In its house in Russell Square,

Work in London

London, Jan. 15

London, Jan. 18

THE amazing activity of John Singer Sargent and the grand total of his stupendous output can only be comprehended when we remember that the gigantic exhibit remember that the gigantic exhibition just opened at the Royal Academy has been formed almost entirely from works obtained in Great Britain. Even so it does not include the Wertheimer series or the Lord Ribblesdale portrait from the National Gallery or his "Ellen Terry as Lady Macbeth" which is still at the Tate. Yet this exhibition is surely the largest collection of works by one artist that has ever been shown in London. No less than 10 gaileries are filled with some 600 oil paintings, water colors, studies and drawings, while in the Central Hall are a few examples of Sargent's sculpture, the principal exhibit here being "The Redemption" in bronze, a gift from the artist's sisters which is to be erected as a memorial in the crypt of St. Paul's Even so it does not include memorial in the crypt of St. Paul's bumptiousness in his composition, his concentration on facts would

A Prodigious Worker

The exhibition is a wonderful revelation of the continuous achievement and unflagging industry of one reverence which we can detect in "The Moraine," and many other paintings, wins our affection and sympathy, assuring us that Sargent, of the most universally admired painters of our time, and when it is remembered that all these hundreds of paintings and studies only repre-sent about one-third of the artist's sent about the tribute of the tribute total output, it is clear that Sargent was above all things a worker. That is the first lesson to be learned from the exhibition.

To enumerate the famous groups, the single portraits, the landscapes, the street scenes in oils, the sketches in water color, the studies and the drawings would add little to our drawings would add little to out knowledge of the artist, and it is of greater interest to endeavor to assemble to exhibition of recent work by members of the New York Camera Club.

sonality of this master.

So far the numerous appreciations of Sargent's art which have appeared have been concerned chiefly with his brilliant execution. But technique, it cannot be said too often, is only a means to an end, and while we are all prepared to grant his supreme mastery over the material of paint, the thing that often his supreme mastery over the material of paint, the thing that often baffles us is to know what exactly was in the thought of the artist. What was Sargent's supreme aim? What was his goal in art?

As we survey the vast array of his work we feel more and more that Sargent was supremely interested in the equally difficult gum-bickromate, sargent was supremely interested in

Sargent was supremely interested in representation. He was no lover of "Art for art's sake"; he did not love paint for paint's sake, but only as qualities of the medium seem to be material for the process of represen-tation. It afforded him the means for Among the landscapes one noted rendering with exactitude the sen-the pleasant hazy river scenes of sations of sight, and because Sargent Floyd Vail, whose snow pictures, saw further than most portrait painters, his portraits have been both
praised and feared because of his
insight into character. But taken in
conjunction with his painting of
landscape and architecture, it may
be argued that the characterization

tion and "airs and graces." It is for this reason that some of his portraits have been described as ruthless. For example, if he thought that a woman looked supercilious, he did not scruple to express her superciliousness, as he did in the portrait of Miss Priestley. He would not flatter anybody, but he was always just. On the other hand, the robes of office and almost impassive judicial mask of Lord Russell of Killowen did not conceal from Sargent the essential kindliness and bonhomie that lay behind, and in his portrait he allows us to see the man in the judge. Consultation of the street scenes one was attended by the "Pennsylvania State by the spanting approaches to had for the bightest. His painting approaches to that of Velásquez and he highest. His painting approaches to that of Velásquez and he highest the highest His painting approaches to the highest. His painting approaches to the highest. His painting approaches to the highest His painting approaches to the highest. His painting the highest. His painting the behind, and in his portrait he allows us to see the man in the judge. Consequently the great power of characterization which distinguishes Sar-terization which distinguishes distinct distinguishes distinguishes distinguishes distinguishes distinguishes distingu seamed and melancholy visage of "Stewart Travis," an excellent quiet work by Walter S. Gurnee, and the strong features of "Pirie MacDonald" as presented by Dr. Kilker—not without a suggestion of furtive-

plar, of whom it has been said "no great painter has ever painted so much and betrayed so little emotion," the thought of Sargent often head and hat being kept outside the picture. Alfred C. Johnston is to be appears to us as a highly polished surface reflecting marvelously whatever is before his eyes, but adding no comment of his own. Sargent has a true Anglo-Saxon in this habit emotional reticence. All that technique could do, he would do superbly. We can feel the very effort of voice production in "Mrs. George Batten singing"; his "Japanese Dancing Girl" is so full of movement that she seems to sway slowly before our eyes; he can show us graciousness in "Lady Sassoon"; proud assurance in "Carmencita." He will tell us everything about everybody, except himself; his own reserve is impenetrable.

In this severe restraint in emo-GEORGE FOOTE DUNHAM

is an exercise in painting, because the artist failed to perceive any necessity for wonder or reverence cessity for wonder or reverence to the perceive and the strong racial note of the peninsula.

most penetrating portraits, it is still more evident in his landscapes and street scenes. Nothing could surpass the brilliant actuality of his painting is full of joy, but that joy is the painter's delight in his exact notation of the sensations of sight. Beyond this his thought to us is as a sealed book. Still more wonderful is the process of the artist's and the highest degree would not have made Sargent what is the rocky Alpine landscape, "The

typical of his accepted talents, and there is abundant evidence of his Spring Exhibition at vigorous brushwork, his easy treat-ment of intricate detail, and his airy color schemes. But this panorama of the Spanish Provinces cannot be considered as ranking with his best work. There is, nevertheless, the same popular appeal that Sorolla al-ways exerts in his grouping of figures in the open; the decorative play of banners and sails lightly touched with the wind, the happy surge of the holiday crowd, the busy detail of ing come to pass much as usual.

In the matter of detail there is icism lies in the artist's inability to whip these designs into one coherent whole, to contrive some way by which the great mass of detail and coloring might be kept within some general patterning or color arrangement. There has been no attempt on the artist's part to match or balance the various parts of his freize; no attempt to co-ordinate the many conflicting units that make up the Hispanic Society's new acquisition. Thus, where there might be a dramatic and abiding unity of pictorial thought, there is only a sense of a too great abundance of riches. True, there is a certain pleasure to be had' from the riotous display of costumes, accessories, and snatches of landgoverning wall decoration.

The largest of the panels runs the whole length of one wall, and gives comprehensive view of "Castilla" in holiday garb. A religious procession winds its way through a throng of gayly dressed peasants, and there is plentiful use of flags and folderols to accent the canvas. The "Andalucia' is one of the most striking designs with two mounted horsemen carrying long wooden spears and a herd of oxen seen against some large cactuses under the open sky as they journey to town. There is hand-some paintings of "Sevilla" in the mood of the dance, and a colorful glimpse of "Valencia" in festival time. "Aragon" with is dancing peasants in their long green skirts is an especially happy composition, with more compression of relative forms than in most of the panels.

Radio Sets Needed for Lighthouse Keepers

Washington, Feb. 1 SECRETARY of Commerce Her-bert Hoover has asked for the contribution of radio sets for the country's lighthouse keepers. This isolated underpaid Government service belongs in the first rank of shut-ins and would benefit greatly by the gift of radio receiving sets, Secretary Hoover said. He announced that a Philadelphia woman had presented 25 sets for these folks and that several hun-

dred more are needed. There are 720 lighthouses on United States territory, some as far away as the Aleutian Islands, and the personnel of the lighthouse service is completely isolated from the world, he said. Receiving sets may be shipped to the Lighthouse Service, Bureau of Navigation, for distribution among these people.

CHRISTIAN SCIENCE LECTURES RADIOCAST

JOLIET, Ill., Feb. 1-A Christian Science lecture, to be given by Paul Stark Seeley, C. S. B., of Portland, Ore., a member of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston. Mass., Feb. 1, will be radio-cast by Station WCLS, Joliet, Ill., 214 meters wavelength.

The lecture, which begins at 8 p

m., central standard time, is being given under the auspices of First Church of Christ, Scientist, Joliet,

BIG INCREASE SHOWN IN COKE PRODUCTION

Coke manufactured in Massachusetts will show an increase of about 150,000 tons this season, due to the anthracite strike, it is stated in a report just issued by the Massachusetts emergency fuel administration, signed by Eugene C. Hultman, chairman, and Charles H. Adams and William C. Kneeland, commissioners.

The report said: "In the period April 1 to Dec. 31, 1925 (nine months), some 297,745 tons of coke made in this State were reported as sold for domestic purposes, as compared with 269,439 tons for the entire preceding year (April 1, 1924, to March 31, 1925). This coke was sold to the householders either by the producing companies direct or through retail dealers.

"Retail prices of coke delivered to householders by the local companies manufacturing it vary in different communities; prices range from \$10.50 to \$14 a ton, with two gas companies, Lowell and Springfield, charging \$15 a ton."

EDITORIALS

The publication of the annual report of the Rhodes trustees, which shows that there were

Cecil Rhodes' Ideals of Education

186 Rhodes overseas scholars at Oxford last year, derived almost equally from the British Dominions and the United States, recalls attention to the unique educational ideals which underlay Cecil Rhodes'

will. It is probably not an exaggeration to say that Mr. Rhodes' Foundation still holds the field as having behind it the most profound and the most interesting vision of what could be accomplished by a great educational trust.

Rhodes' ultimate ideal was to bring about a closer unity between the English-speaking peoples, to which he later added Germany, as being the most certain way of securing the advance of civilization and lasting peace on earth. He saw that the most effective road to that end was not politics, but education truly conceived. He was convinced that, if his scholars were brought under the influence of the noblest ideas, they could not fail to be inspired by the same zeal and objects as himself.

He therefore divided his scheme into two parts. On the one side he instructed his trustees to select young men who, in competition with one another, had come out on top under certain very severe tests. They had to be men of intellectual ability, physical health and activity, moral character, and possessed of instincts of leadership and of interest in their fellow men. These were the tests which he laid down as indicating true manhood. It would not be easy to better them.

On the other side, he provided the financial means whereby the men selected on these lines could go to Oxford for three years, partly to become acquainted with one another, and partly to receive the higher education which he thought would best qualify them to understand and help to solve the vast world problems which he saw were inevitably coming up to the Englishspeaking peoples to be dealt with.

Rhodes' educational ideals were quite simple. Education had for its ultimate end public service; thus he expressed the hope in his will that his scholars "would esteem the performance of public duties as their highest aim in after life." The qualities which he sought to elicit in his scholars were fourfold. First, the capacity to think and reason for themselves; secondly, fidelity to the moral virtues, which he defined as follows: "truth, courage, devotion to duty, sympathy for and protection of the weak, kindliness, unselfishness and fellowship"; thirdly, the instincts for leadership, which he interpreted as an active interest in and love for his fellowmen; and, lastly, activity and health of

There is surely little doubt that if the scholarship system which Rhodes founded can turn out every year some sixty or seventy men who have these qualities, who have rubbed shoulders with their fellows from other lands in one of the most ancient and famous places of learning, and who leave Oxford imbued with a zeal to work for world unity and world peace in such ways as they can in their own lands, they cannot fail in due time to have an immense influence in helping to bring about that civilized, progressive, peaceful and law-abiding world of which Cecil Rhodes dreamed.

One fact is becoming more and more apparent. It is that violations of national and

Abetting Dry Law Violations

state dry laws will continue just so long as people in the United States demand liquor and are willing to pay the price which those who assume the risk of providing it are disposed to charge, If it

were possible to impress upon those who are, in most other respects, willing observers of the laws of the land a realization that at the moment they refuse to patronize the peddlers of contraband liquors this illegal traffic will automatically stop, the main problem of law enforcement as it affects the Eighteenth Amendment would be finally and satisfactorily

The chief argument of the organized nullificationists has been, especially since it became apparent that wholesale violations of the law were possible, that as the law was not being absolutely enforced it should be repealed. No more specious argument was ever advanced in support of any cause, however unworthy. No one would think of putting it forward as a reason why any other law, proscriptive in its character, should be repealed. The amendment was enacted and the law to enforce it passed to limit, as far as possible, the traffic in and use of the alcoholic beverages which had fallen under popular condemnation. Is it logical to argue, because a few, or many, insist upon continuing an indulgence in these liquors or their synthetic substitutes. that the law should be repealed, either by nulli-

fication or by popular action?

The great difficulty in the way of a complete enforcement of the law is the failure of thoughtless or vicious persons to realize that a really constructive national reform has been undertaken. It is not enough for them to insist that this decision was reached without their consent. In a democracy, once a course of action has been determined upon, there remains no longer the question of majorities, minorities, or factions. Under the very Constitution whose provisions the nullificationists hope their inalienable liberties will be preserved, along with those of their neighbors, the manner of reaching such an important decision is clearly provided. In it, likewise, is provided the method by which a decision once reached may be reversed. But this is not by nullification, neither is it by careless or

wanton violation. There is abroad in the land, fostered by the avowed enemies of society, the confusing and misleading belief that wholesale violations of the prohibition law have destroyed, in the thought of the people generally, their respect for all law. Such mesmerism is as vicious and

aggressive as that which would induce or condone the undermining of the democratic structure upon which the Government rests. It heralds, as it would welcome, the knowledge that the selfish end sought had been attained, a complete social and political revolution, and the inevitable chaos that would ensue. In it there is seen only the vain attempt of the worst element of society to make it appear that prohibition; rather than the violation of the law, has brought a progressive nation of more than 100,000,000 free people to the verge of some awful crisis.

The plain duty of every sober-minded person in the United States is to help prove the falsity of such a claim. This does not call for any unusual or conspicuous effort on the part of the individual. The final and decisive blow can be struck at the moment when the people of the United States, individually and collectively, refuse longer to patronize the avowed enemies of their homes and institutions.

With all the enthusiasm of youth, and with the determination gained by experience in

which there has been little of disappointment or discouragement, New York, or that portion of the Greater City which is distinguished as Manhattan, is preparing to celebrate, during the coming summer, the

three-hundredth anniversary of its first settlement by whites. The occasion is an auspicious one only as it marks a milestone in the course

of an important community's almost unparal-

New York's

Tercentenary

leled growth and development. There is nothing in all Manhattan's long expanse from north to south, or in its narrow breadth, to indicate its assumed antiquity. It has always been "new." First its crude shield is said to have borne the words, "Novi Belgii." Later it was New Amsterdam. Still later it adopted the present name, New York. The city's restlessness and progressiveness have kept it always true to its distinguishing adjectival cognomen. As one views it today in all its superb grandeur and perennial freshness of contour and color, it recalls the story told of the ancient Methuselah's celebration of his eight hundred and fiftieth anniversary. It is related that upon this occasion, there being no lighted candles to supply the data, a lady who was among the invited guests asked the dignified host what was his exact age. Upon being courteously informed,

not look a day over eight hundred. So with the metropolis of the Western World. Its years hang lightly upon it, and it seems ever to grow younger and more sturdy. With becoming care for its antecedents and its traditions, it has set apart great halls and picturesque depositaries wherein are preserved the evidences of its genesis and progress. It is to these places, and not to the streets and avenues, that the investigator must go to find the proofs which are so carefully put away. But these, no doubt, will be proudly displayed to home folks and visitors when company comes to help celebrate the ap-

she is said to have declared that it was incon-

ceivable to her because, as she insisted, he did

proaching anniversary. Civilization has scarcely written, in all the ages, a more engrossing romance than that woven about Manhattan Island. Peter Minuit and his fellow emigrants from Holland purchased the ground from the Manhattan Indians for trinkets. valued roughly at sixty guilders, about \$24. Perhaps there has never been, anywhere in the world, a greater or more rapid advance in values and in growth than on this spot. There should be exhibited, for comparison with the present gigantic buildings which the descendants of these Hollanders and their neighbors have erected, replicas of the bark-covered huts and the crude dugouts which sheltered the pioneer New Yorkers

But there are more significant aspects of this progress which cannot be displayed by such contrasts, no matter how striking. Those who are beset by the unhappy belief that the civilization of the present day is decadent, or is languishing, will find, if they choose to seek them, convincing and conclusive proofs in refutation of their fears. Even in the Greater City, where it is suspected such evidences are scarcest, the weight of proof is overwhelming. It is found in the schools, in the churches, in business, and, more abundantly than elsewhere, in the homes. Let those who doubt compare the conditions of today with those of one, two or three centuries ago, if they will. They will find that neighborliness, friendliness and forbearance are increasing as there are being swept away and destroyed the sordid influences of selfishness, bigotry and narrow prejudice. It is in the realization of these better things, which abound, that the people of the newer age see the gratifying assurances of their own advancement.

Friendly but emphatic protest is to be made

Canada to Protest Lake Water Diversion

in behalf of Canada, it is stated, against the enactment of a bill now before the United States Congress which proposes provision for the maintenance of a ninefoot navigable channel in the Illinois and Mississippi Rivers. An-

nouncement to this effect has been made by Charles Stewart, Minister of the Interior at Ottawa, in an address before the House of Commons.

Canada, as well as the intervening states, depends for a definition of the existing rights of the claimants to a greater volume of lake water than is now permitted upon the terms of the permit issued by the Secretary of War of the United States in March, 1925. The formulation of this order, or permit, followed a long continued contest in the United States Supreme Court. It was alleged, and not denied, that the Chicago sanitary district officials had for years violated a permit authorizing the diversion of slightly more than 4000 feet of water per second from Lake Michigan, by withdrawing upward of 10,000 feet per second. It was finally decided by the court that Chicago had no right to divert water from the lake in excess of 4000 cubic feet per second. But in order that no great hardship

should be inflicted by the immediate reduction of the water necessary in the operation of the city's sanitary system, a temporary increase to 10,000 cubic feet was authorized by the War

Department.

It is now claimed that the purpose of the pending measure, the passage of which is to be opposed by Canada, and which is incidentally opposed by the intervening states named, providing for the maintenance of a nine-foot navigable channel in the Illinois and Mississippi Rivers, will nullify the findings of the Supreme Court and perpetuate the temporary permit issued by the War Department, which was clearly intended only to bridge over an

The dignified protest to be made in behalf of the Canadian Government cannot be carelessly regarded, any more than can that of the states which have asserted a regional, and perhaps a national right, in opposition to the alleged rights of Chicago and the less tangible rights of the people of Missouri, Kentucky, Tennessee and Louisiana. However important the proposed nine-foot channel may be, commercially, to the industries of the states last named, it should be remembered that the waters which it is insisted must be diverted from Lake Michigan are not of paramount importance in maintaining that channel except in the periods of low water in the Mississippi. Even at such time the lake waters constitute but one-fourth of the low-water flow, approximately. It is not impossible, it would seem, if the maintenance of this flow is vital to the industries of the states named, that it could be assured by conserving, in the upper reaches of the river, or in the Missouri above its confluence with the Mississippi, the waters now permitted to go to waste in flood times.

Canada and the states arrayed against the policy proposed have an unquestioned right to insist upon a reasonable maintenance of the Great Lakes levels. The final decision must turn upon a realization of the greatest rights of the greatest number. With that understood, the reasonable course should not be hard to

Protest against newspaper cartoonists' attitude toward plumbers has been made at Waterbury by the Master

There

Are

Others

Plumbers' Association. In this protest it was intimated that the cartoonists had much to do with delaying the rise of this necessary trade to the level of a profession. We were not aware that

plumbers more than many other men had been despitefully used by professional humorists nor that the public held them in low esteem. Perhaps we are mistaken, but at least it can be said that there are other vocations and trades, other professions and classes which might protest, but which suffer in a strong silence.

For example, the legal profession does not always come off well in the cartoons, the gentlemen who sell ice are by no means respectfully treated, the college professor and many other types are by no means well used, yet many lawyers are quite as high-minded as plumbers and there are dozens of professors who deserve considerate handling. But all these are muteit is the plumbers alone who raise their voices. In doing so, their zeal leads them a trifle astray, for all men of the world must admit that if plumbing becomes a profession, it will lose the pay of a trade, and glory will take the place of ome. It must be that the plumbers, aside from having been unfairly treated in some cases, feel themselves so much fixed in the public scheme that they can speak with special privilege to be heard. It is undeniable that the public can dispense with essay writers and novelists, but it can't do without the plumber. That is constitutional and, as Carlyle would

have said, inexpugnable. This being so, the plumbers seek a definition of their standing. They have come to their Runnymede and will have a charter that forever protects them against the cartoonist and his wayward knack. There must be no more levity, no more easy innuendo, no more oblique depreciation of a calling intrenched in this century's progress. It has been whispered that part of the cartoonists' ill-timed pleasantry aimed at a certain deliberateness in the movements of plumbers, but that is merely the fault of the cartoonists who do not understand the values of dignity. It has also been implied that plumbers charge a good deal, a matter only to be settled by exhaustive investigation. What can be said, however, is that plumbers are not the first craftsmen to bring forth this criticism from a public which seldom pauses to consider what it would do were there no plumbers.

Editorial Notes

Sentiments worthy of the widest publicity were those exchanged between King George V and President Coolidge relative to the rescue by the officers and crew of the American liner President Roosevelt of all hands of the British freighter Antinoe. "In expressing my thankfulness and admiration for this splendid example of skill and gallantry, I know that I am only voicing the feeling of all British hearts," wrote the King in part. And the President answered that the event is but another illustration of the heroism and gallantry which have characterized alike the mariners of the United States and Great Britain, continuing, "While regretting the occasion therefor, I rejoice that American sailors have been able to help those of Great Britain." These are the things which bind nations together.

When a large store in an American metropolis thinks it worth its while to carry in the city's newspapers an advertisement under the caption "Truth," one need not despair of the country's business merale. "No buyer, no salesperson, and least of all the advertising department, is permitted to misrepresent, either openly or by equivocation, any item of merchandise in this store," this advertisement reads in part, and to this significant statement of policy the following is added:

Any time the truth won't sell the kind of goods we sell, we'll change to another kind of goods.

The Diary of a Political Pilgrim

FROM A LONDON CORRESPONDENT

The Coal Commission, which everybody is hoping will | agreement that it has shown wisdom, grasp and fairfind the way out of the present coal tangle in Britain, has finished taking public evidence after four months' steady work. It cannot truthfully be said that the evidence which has been laid before it has been very encouraging. It is clear that coal mining, the ultimate basis of Brit-

ish industry, is suffering from a séries of maladies, springing partly out of world conditions and partly out of internal feuds and bad organization, which are not likely to disappear without much patient work and good will.

The external troubles of the industry are the same as those which have given rise to difficulty in the coal industry in the United States, in Germany, in Belgiumindeed, all over the globe. There is overproduction of coal in the post-war world, and in consequence there is unemployment in coal mining everywhere, and coal owners are competing against one another for the limited market by lowering wages as a means to lower prices.

The effect of these external influences has been inten-

sified in Great Britain by the fact that the mining population has steadily increased since the war, owing to the fact that many young men have been unable to find employment in other trades because there is depression there also, and because of the difficulty of emigration.

The internal difficulties are threefold. First, there are more than 3000 pits and 1500 separate coal-mining companies. Some measure of amalgamation is clearly overdue, but nothing has been done to bring it about. Secondly, old-fashioned pits are not being closed down, partly to avoid adding to unemployment, which means that the general average of wages is low and the average cost of production is high. And thirdly, the relations between the mining association and the miners' federation are practically those of open war.

The evidence before the Coal Commission brought out these facts clearly enough, but it offered little by way of a practical solution. If the Coal Commission itself cannot do better then the witnesses who came before it, then the situation ... indeed parlous.

+ + +

The mine owners took up an utterly "stand pat" position. They would not admit that anything was seriously wrong with the industry except the general state of trade, and their practical proposals were summarized by the chairman as meaning that the miners should work for an hour longer without remuneration, that 100,000 miners should be dismissed, and that railway rates should be reduced by 25 per cent, though even then the industry would be running at a loss of 3d. a ton.

The miners were not more helpful. They made no suggestions for dealing with the immediate crisis at all They simply produced a grandiose plan for creating a supertrust for the coal and all ancillary industries, including electricity, under government control, and they admitted that, even if it could be successfully carried into effect, as is at least doubtful, it could have no bearing upon the serious problem with which the coal industry and the community will be confronted on May 1 next, when the subsidy comes to an end, and some other means of bridging the gulf between hours and wages, on the one side, and solvency on the other, has to be found.

The most obvious result of the commission's public ession so far is to disclose that the leaders on both sides, in their present temper, are extremely unlikely either to find or to put through a solution on their own account. They seem to be bitterly hostile to one another and unable to envisage any other solution than their own.

Everything, therefore, depends for the time being upon the Coal Commission itself. Nobody expects that it can produce a ready-made plan which will surprise the Nation by its simplicity and practicality. But there is general

mindedness in the conduct of its inquiry, and its recom-mendations will certainly be treated with attention and respect.

At the commission's concluding session, its chairman, Sir Herbert Samuel, late High Commissioner for Pales-tine, announced that it hoped to report by the end of February. There will, therefore, be two months left over in which to arrive at an agreed solution before the nine months' truce bought by the subsidy last August comes to an end. Coal, or the smoke it creates, will certainly overshadow the political horizon of this coming spring.

The Government has announced that it hopes to hold an imperial conference in the autumn. It is a curious fact that the British Empire, or Commonwealth of Nations, as it has been renamed, has no central authority at all. Each of its self-governing nations is completely independent of the rest and of Great Britain. The King simply presides over the whole as a kind of hereditary nonpolitical chairman. There is no legislature or executive which can speak or act for the Empire as a whole.

The nearest approach to a common organ is the Imperial Conference, and this consists of the Prime Ministers of the self-governing states and a representative of India, who assemble every three years or so to deliberate about their common affairs. But this conference has no powers of its own. It cannot act by majority vote. Every agreement reached at its meetings is subject to ratification or rejection by the six parliaments of the Empire.

The main purpose of the session proposed for this autumn is to discuss the effect on inter-imperial relations of the Locarno settlement. The Locarno pacts, it will be remembered, were signed by Great Britain, but discretion was left to the dominions to ratify them or not, as they liked. If they do not do so, what is to happen should France or Germany violate the terms of the pact?

The Locarno Pact, indeed, touches the most fundamental difficulty which confronts the British Commonwealth. The six nations of which it is composed have solved the problem of their internal relations on the basis of complete self-government. But how are six separate nations, scattered all over the world and with no common machinery, to conduct a common foreign policy?

Locarno got around the problem only by postponing The Imperial Conference will assemble to try to find a permanent solution.

The Imperial Conference will also certainly have to deal with economic problems. There is a growing dissatisfaction everywhere with the existing fiscal system of the Empire. The Protectionists are strong in Great Britain. The country or low-tariff parties are strong everywhere in the dominions. There is little doubt that an attempt will be made to see whether some further steps cannot be taken toward greater freedom of inter-imperial trade.

The extremely successful exhibition of some 615 of John Singer Sargent's pictures in the Burlington Galleries reminds us of how much more international art is than anything else in the modern world. Sargent was an American by birth. He learned his art in France. He spent most of his life and did most of his painting in England.

Yet there is no jealousy about it. All nations can agree to praise and claim as their own a painter who will certainly rank with the foremost artists of the age, who reflected in his work the best qualities of all his three motherlands, and who in consequence attained to a standard which was universal in its appeal. When will the nations come to recognize the brotherhood of man as clearly as they recognize the brotherhood of art?

The Week in Geneva

GENEVA The international jury of architects, representing nine European countries-England, France, Italy, Switzerland Spain, Holland, Austria, Belgium, and Sweden-has met to decide on the plans for the new home of the Assembly of the League of Nations. The choice of the ground on which the building will be erected is already practically agreed upon, although the details of the sale have not been completed. The League of Nations counts on acquiring fully two-thirds of the grounds of the Château Banquet in addition to the entire property known as Prieure. It would appear that the possible needs of the future have not been overlooked when negotiating for this land, as it will allow, for example, additional constructions within

its domain. The new palace will be erected along the water-front promenade, near the Secretariat building, which will be connected with the new Assembly building by a tunnel or some other means of communication which the jury of architects will decide. Roughly, the whole forms a square, inclosed on two sides with lake views (Quai President Wilson), the Route de Sécheron and the Rue Butini. The Secretariat building, formerly the Hôtel National, which was unsuccessfully offered for sale by the League of Nations, has proved eminently satisfactory, and, apart from an additional story to be added, no other transformations are contemplated,

Telephonic communication between Geneva and Paris s to be greatly simplified by the opening of three new telephonic lines during 1926. These will be direct communications linking Geneva and Paris by way of Faucille The work will be put in hand during the summer, and certainly before the Assembly of the League of Nations. Meanwhile the pneumatic post which will be installed at the General Post Office, Geneva, for expediting the transmission of telegrams and express letters, will begin functioning on March 1. The conducting tubes connecting the palace of the League of Nations and the postal centers of Mont Blanc and Stand have been completed some time back, and the work of construction of the station itself

The Swiss Women's Year Book for 1926 has just appeared. A portrait of Charles Secretan, the great chambion of woman's rights, appears on the front page with biographical note written by Mr. Demierre-Schenk. Many of the most pressing and significant questions of the day are reviewed by women well known in feminist circles and for their literary and social activities.

4 4 4 Since the return of Alsace to France the heavy consignments of vegetables and early fruits coming from the south of France travel over French rails as far as Bâle, which has become an important center for these necessities, as it was before 1870. As La Barfusserplatz, where the buying and selling of the produce takes place, has no conveniences for the storing of the merchandise, it has become necessary to construct a large modern market, with cellars and refrigerators, on the Kohlenplatz, in close proximity to the French railway station. The market will be connected with the main line by one passing underground and where the produce can be conserved under the same conditions as in a warehouse.

+ + + The special commission appointed to inquire into the conditions of the forthcoming exhibition at Philadelphia, Pa., relative to Swiss participation therein by an exhibition of clockmaking, has decided that Switzerland will not participate in the exhibition, either officially or privately. In consequence the grant of 300,000 Swiss francs has been * * *

The Austrian Chancellor has made known to the Federal Political Department that his country will partici-pate officially at the International Exhibition of Interior Navigation and Utilization of Hydraulic Power, to be held at Bale this year. The Austrian Minister of Agriculture and Forestry intends to furnish a complete résumé, with plans and photographs, of hydraulic power progress in his country. This presentation will serve as an interesting complement to the private exhibits, among which are to be represented the Society of Steam Navigation on the Danube, the Society for Technical Nautical Construction at Vienna, Society for the Construction of Screw Propellers, etc. Spain also is showing a keen interest in the Bâle exhibition, and two electrical companies of Madrid have announced their intention of exhibiting

The members of the Botanical Society of Geneva, together with friends and representatives from other learned societies, recently celebrated, in the great hall of the university, the fiftieth anniversary of the society. The ceremony opened with a presidential address by Henri Romieux, who, strangely enough, had occupied the position of first as well as that of fiftieth president. None better than he, therefore, could retrace the history of the society. The president pointed out that the first botanical society was actually founded at Geneva in 1852, but disappeared some years later, in 1856. The present one was fo in 1875. During the period from 1901 to 1908 a catalogue was published under the direction of G. Beauverd, and in January, 1909, it was decided to publish the bulletin annually.

Letters to the Editor

Brief communications are velcomed, but the editor must remain sole judge of their suitability, and he does not undertake to hold himself or this necessapper responsible for the facts or opinions presented. Anonymous letters are destroyed unread.

The Ethical Basis of Personal Selling

To the Editor of THE CHRISTIAN SCIENCE MONITOR: In a letter, published in your columns last spring, a reader expressed the opinion that one of the causes of any unsound economic condition present today in American life was salesmanship. He went on to say that high school and college students were taught how to make use of human shortcomings to sell goods to consumers who did not need them, and, more important, who could not afford them. "High pressure" salesmanship is common, he believes, and the public in general does not know how to combat it.

This reader is not alone in his opinion. Many others have voiced the same objections to present-day methods of distributing products of all types. And their objections are justified in a wide variety of cases, although the lack of economic justifications is usually due to ignorance of a better method, rather than any intent of dishonesty.

Within the last two months, however, a book has been published on this subject which clearly shows the tend-ency toward clearer thinking upon this very important subject. The A. W. Shaw Company has public ciples of Personal Selling," by Dr. H. R. Tosdal of the Harvard Graduate School of Business Administration, in which the opening sentence is, "The ultimate consumer and his wants govern commerce and industry.

Dr. Tosdal goes on to say: "The fact that commerce and industry are based upon the desire to satisfy the economic wants of man is the starting point for any consideration of the economic object of selling and salesmanship." Again: "From the point of view of public welfare, good salesmanship is that which really and effectively helps to satisfy wants and yields the largest surplus of satisfactions from exchange transactions."

He then says that salesmanship is a productive activity, creating both subjective and objective values. Any business man, believes Dr. Tosdal, who is interested in maintaining his business year after year, will find that "his own best interests run parallel with those of the buying

This point of view underlies each of the following chapters, coming to the fore, however, in the last, which contains a discussion of ethics. Here he writes: "It is being learned, slowly, perhaps, in some respects, but surely, that the ethical basis and the profitable and successful the surely that the ethical basis and the profitable and successful the surely that the ethical basis and the profitable and successful the surely that the ethical basis and the profitable and successful the surely that the surely that the ethical basis and the profitable and successful the surely that the surely that the surely that the ethical basis and the profitable and successful the surely that the surely tha cessful basis of selling are identical."
